

OHMM® has developed a revolutionary outdoor cushion technology using some of the world's most advanced textile materials to create cushions you don't have to worry if they get rained on. The foam cores will stay dry and after a short time airing, the fabric covers will dry out fast.

### FOAM CORES

The high density foam cores provide firm and long life performance (no sagging), and are covered in Dacron to provide a soft feel and luxurious shape. Then they are covered in an exclusively created waterproof UV spunbond wrap to protect the foam core from absorbing water.

A 'unique window' at the base of the cushions allows the foam cores to breathe (no air bag effect) as well as allowing air ventilation.

### 'UNIQUE WINDOW'

### SUNBRELLA® FABRIC

Finally covered using Sunbrella® - the world's best outdoor fabric - which is specially coated to make them water and UV-resistant, with no loss of comfort.

After a rain shower, allow your cushions to dry out to protect them from mould stains.

### DRY OUT

### STORING CUSHIONS

We recommend storing your cushions when not in use for long periods or use OHMM® Furniture covers. Before storing, ensure they are fully dry.
