

OHMM has developed a revolutionary outdoor cushion technology using some of the world's most advanced textile materials to create cushions you don't have to worry if they get rained on.

ADVANCED TEXTILES

Working with US textile manufacturers and coating specialists, OHMM has created an exclusive waterproof and UV resistant spunbond lining to protect the cushion foam cores from absorbing any water or moisture.

Rain will simply 'run off' over the unique dome shape created using Dacron®. A specially designed breathable spunbond and mesh window at the base of the cushions allows the foam cores to breathe, preventing any 'air bag' effect as well as allowing for internal air ventilation.

UNIQUE CONSTRUCTION

OUTER FABRICS DRY QUICKLY

With the foam cores remaining dry, the high quality outdoor acrylic fabric covers will dry out extremely quickly after exposure to even heavy rain. Allowing some sun and ventilation will speed up this process and they will be ready for use again.

After a rain shower, allow your cushions to fully dry out to protect them from mould stains developing, especially in tropical climates. We recommend storing your cushions when not in use for long periods with OHMM Furniture covers. Before storing, ensure they are fully dry.

CARE & MAINTENANCE
