

WHY WOVEN

It's a good question. When we started in the industry, woven synthetic rattan was the new outdoor furniture material. We instantly saw the potential with its high performance, design versatility, luxurious touch as well as the material being highly durable.

OTHER MATERIALS

Over the years, we have experimented with other materials and found the following issues.

- Stainless steel will 'tea stain' and rust if not regularly maintained and it gets exceptionally hot under the sun.
- Aluminium frames with mesh seating are prone to mould, sagging and splitting. Difficult to replace mesh outside a factory environment.
- Teak wood patinas (goes grey) and doesn't look premium after a while. Needs regular maintenance with chemicals to restore.

Bottom line, we found they don't add up to great looks, performance or durability. So, we leave it to others to make products from these materials.

DO ONE THING WELL

After almost two decades in the industry, first hand experience and common sense have taught us that world-class woven outdoor furniture is enduring above all other materials.

So, we focus on producing the best quality woven outdoor furniture in the world. And nothing else.
